WE PROVIDE OPPORTUNITY FOR YOUNG PEOPLE
Beyond self-confidence: a participatory evaluation of personal change in Science Gallery’s Mediators

Katharina Bower and Andrei Manolescu

Abstract

Science Gallery is an art and science engagement with young adults within the art and science programmes of Science Gallery. Public Particpation and Public Engagement, especially in relation to science and technology, have been identified as key issues in the development of science and technology education. This paper explores the extent to which Science Gallery’s Mediators have contributed to public engagement, especially in relation to science and technology education. The study takes place in Science Gallery, a public engagement venue in Dublin, Ireland, and the findings are based on a participatory evaluation process. The results highlight the importance of Mediators in facilitating public engagement and the potential for Science Gallery to play a significant role in promoting public engagement, especially in relation to science and technology education.
